

Finally, the last table of PTE values on page 23 still needs the PM10 tons/yr number corrected.

As far as the values for actuals, future actuals, and PTE, I have looked at them again, and feel comfortable with them as is, except that HAPs do not match with the abstract description.

There is one last thing I would like to discuss concerning our prior discussions on complying with WEPCO. Please call regarding this.

Others commented on correcting punctuation, word flow, and the like. If you would like me to go over these with you, please call. Some are pretty obvious, and should be changed. The most glaring could be misconstrued differently than we intend. These comments do not appear significant in that a new peer review is needed, but let me know.

Thanks,
